In 2018, the largest conference for green school leaders, Green Schools Conference & Expo (GSCE), will be held in Denver, Colorado, co-located with Rocky Mountain Green (RMG), the largest green building event in the Rocky Mountain region.

This integrated conference duo brings together experts from diverse industries within the green building and education worlds for a unique forum of collaboration and networking. With a focus on occupant and student engagement, health in the built environment, student learning, waste management and energy conservation, education sessions at both conferences are relevant for industry leaders working across sectors.

GSCE and RMG provide inspiring programming and targeted networking opportunities. Sponsors receive prominent brand recognition and associate with the premier green building event in the Rocky Mountain region and the premier green schools event in the U.S. Exhibitors are able to interact with a wide array of stakeholders, including potential customers, to promote their products and services to support high performing buildings and schools.

Help lead the green schools and green building movements as a GSCE and RMG exhibitor, sponsor or both! The opportunities listed on the prospectus are designed to fit a variety of budgets and may be combined to meet your desired levels of engagement. We look forward to helping you find the perfect combination of activities to maximize your presence and enhance your conference experience.
GSCE × RMG

Technology
Facilities Operations/Management
Waste/Recycling
The Rocky Mountain region is one of the greenest in the nation! Colorado is among the Top 10 states for LEED and green construction.

Green construction is expected to contribute $23.92 billion to the state’s GDP, 281,000 jobs and $16.03 billion in labor earnings between 2015 and 2018.

Seven of the eight fastest growing states are western and five of those seven are in the Mountain West region.

Green schools use 33 percent less energy and 32 percent less water than conventionally constructed schools, significantly reducing utility costs over the average 42-year life cycle of a school.  

Studies show that increased daylight, better indoor air quality, and hands-on, place-based sustainability curricula are linked to higher test scores.

Controlling exposure to indoor environmental factors, such as carbon monoxide, dust, and pollen, could prevent more than 65% of asthma cases among elementary school-age children.

The Green Schools Conference & Expo (GSCE) is presented by the Center for Green Schools at the U.S. Green Building Council (USGBC), and brings together all of the players involved in making green schools a reality: people who build, operate, manage, lead, and teach in U.S. schools. Attendees engage in hands-on learning, participate in in-depth discussions and problem-solving, and get inspired by speakers at the forefront of connecting sustainability, social justice, and education.

GSCE is the only conference that brings together three groups vital to the success of green school expansion:

- Academics (teachers and school leaders responsible for curriculum and instruction, parents and volunteers)
- Operations (general school or district administrators, facilities operations management)
- Building design and construction (architects, engineers, product suppliers)

It is a valuable opportunity for green school advocates to learn creative strategies and tools that support healthy, green and sustainable schools. The conference provides a space for thought leaders to share their research and experience with companies that are innovating, serving, and building green schools.

In addition to being able to connect with for-profit companies and green building experts, attendees will be able to share with and learn from professionals representing multiple disciplines, including education administrators and non-profit leaders. Schools represented span pre-K through college/university level. Of the 2017 attendees, 57% from the educational sector made financial decisions for their schools or organizations, and 55% only attended one national conference–GSCE.

92% of 2017 GSCE attendees were very likely or likely to recommend the event to a colleague.

89% of attendees rated the conference excellent to very good.
“This was my first Green Schools Conference. My architecture firm focuses on educational projects. I can’t imagine not going to this conference every year now that I’ve gone once.”

“...it was an excellent conference! I learned a tremendous amount.”

“...I got re-inspired to continue with challenging work that I do in my small school—hoping to make a difference, one ripple at a time.”
Rocky Mountain Green (RMG) is the flagship green building event in the Rocky Mountain region, uniting hundreds of industry leaders, experts and professionals dedicated to sustainable building. 70% of attendees are LEED professionals, and their collaboration and sharing of best practices helps move the industry forward.

Attendees especially loved these useful and insightful sessions:

- Colorado Commercial PACE: Revolutionary financing & LEED v4 similarities
- Financial story of high performance buildings
- Biomimicry: Nature as model, mentor and inspiration
- How building codes can support electric vehicles

In 2017, the conference inspired, connected and advanced sustainable building leaders and experts within (and outside) the region:

- Colorado (38%)
- California
- Florida
- Kentucky
- Minnesota
- Nevada
- New Jersey
- New Mexico
- Oklahoma
- South Dakota
- Texas
- Wyoming

Now in its 11th year, RMG is a must-attend event for anyone in the region interested in green building!

96% of respondents said they would attend RMG again.

86% of attendees rated overall RMG experience excellent to very good.
